For Successful Fleet Management

Key Benefits

Improvement in Customer Service

“The integration between Navman and Paragon, a third-party integrator, gives us the ability to track real-time the actual versus planned scheduled routes and make adjustments to delivery schedules where necessary.”

Savings on Wages

“Previously we have always relied on our staff to provide accurate indications as to work schedules. Now with Navman vehicle tracking we have automated this, reducing the time spent doing paperwork for our drivers and making savings on enthusiastic overtime claims.”

Increased Efficiency

“Utilising real-time vehicle tracking in conjunction with Trafficmaster software we are able to avoid traffic congestion and re-route vehicles, both decreasing our downtime and improving our service to our customers.”

Reduction in Downtime

“A real-time alert to notify us that a vehicle is entering two positions on the M25, including the Dartford tunnel, allows our loaders to prepare for the next delivery of goods for that vehicle coming back to base. This helps to decrease our waiting time in between deliveries resulting in reduced downtime and further savings.”

“Anyone operating a fleet of vehicles like ours should be investing in Navman”

Neil Beverley, Director, PMS International Group Ltd
